OBJECTIVE

Seeking challenging opportunity to scale skills and generate value for the company

EDUCATION

San Diego State University,
San Diego, CA
Master of Science in Computer Science
August 2016 - May 2018

Visvesvaraya Technological University,
Karnataka, India
Bachelor in Electronics & Communication Engineering
July 2010 - June 2014

GRADUATE COURSEWORK

- iOS app development
- Android app development
- Computer & Data networks
- Advanced Web Development
- Machine Learning
- Data Mining
- Speech Processing
- Spatial Databases

MASTER'S THESIS

Identification of commonalities and shared origin of language scripts

COURSERA CERTIFICATIONS

- Algorithms Specialization
- Python data structures

TECHNICAL SKILLS

Languages: Java, Python, Swift, C, JavaScript, SQL, HTML5, CSS3, XML, Perl
Frameworks: Spring, EJB, UIKit, Map Kit, Core Location, Alamo fire, Google Maps, Volley, Bootstrap, Angular J
Libraries: Keras, Tensor flow, SciPy, DTW, NumPy, Matplotlib, Librosa
Algorithms: Linear Regression, Logistic Regression, SVM, Naive Bayes, KNN, K-Means, PCA

WORK EXPERIENCE

HCL Technologies, Karnataka, India | Sep 2014 - Aug 2016
Software Engineer

- Debugged, gave enhancements to a strategic driven trading application built on MVC framework in a team of 10 using **vectors, hash map, swing API and XML**
- Created a business process model, versioned Business Requirement Document using ArgoUML in a team of 14
- Facilitated automation by developing a web portal using **Spring, MySQL, JSP, servlet, HTML5, CSS3, and JavaScript**
- Reduced process delays by 60% (5 hours per day) by implementing excel creation & parsing using Apache POI
- Rewarded with HCL Spot Award for successfully completing phase I of Project Management Office Automation

ACADEMIC PROJECTS

- In IOS and Android platforms **(Java and Swift)** created,
  - A finance app to monitor expenses in multiple currencies and alert different levels of budget consumption using firebase, shared preferences, multithreading, JSON, Volley and Alamo fire. Tested manually on Nexus 5.
  - A chat application with the location-based search option. Used firebase, Google maps API, MapKit, CoreLocation. Fixed errors using USB debugging, debug gauges, breakpoints and log messages.
- Designed a drawing application for Android OS **(Java)**. Performed motion detection and computed swipe velocity.
- Implemented a card matching game for iOS **(Swift)** based on MVC design pattern, following Human Interface Guidelines. Made use of optional, property observers, structs, classes, tuples and dictionary. Adapted to different devices with stack view embedding and auto layout.
- Recognized simple speech commands **(Python)** with 70% efficiency using K-means, Mel-power spectrograms, Gaussian Mixture Model, dynamic time warping, Keras, LSTM, L1, L2 and dropout techniques. A team of 5 members.
- Programmed a virtual memory simulation script **(Python)** to simulate page swapping in the physical memory based on "First in First Out", "Random", "Least Recently Used" and "Periodic Reference Reset" algorithms.
- Built a data-logging application **(Python)** using lab jack driver libraries, NumPy, SciPy, matplotlib, and xlrd package.
- Modeled Client-Server communication **(C)** conceptualizing Transmission Control Protocol (TCP). Used struct.
- Created Map in Map Builder with Oracle database **(SQL)** and displayed the same using **(Java)** swing and Map Viewer.
- Implemented session management through an inventory web application using **Perl, HTML 5, CSS 3, JavaScript, AJAX, and MySQL.**
- Created http://grapheton.com and http://cmems2018.com using **HTML 5, CSS 3, JavaScript, PHP, and bootstrap.**
